EDUCATOR GUIDE #3

Curriculum Mapping & Evaluation Guide

15-Minute Lesson Integration, Assessment Rubrics & Survey Protocols

This guide provides flexible, modular integration strategies for fitting digital health literacy modules into existing middle school and high school STEM and Civics courses.

1. 15-Minute Subject Alignment Guidelines

Biology / Health Science

Focus: Evaluating claim mechanics, clinical trial design, placebo effects, and checking scientific consensus.

Computer / Data Science

Focus: Understanding Large Language Model next-word prediction, AI hallucinations, and search algorithms.

Civics / Media Studies

Focus: Analyzing viral misinformation, digital propaganda, manipulation tactics, and public health policy impact.

2. Assessment Rubric: Debunking Assignment

Grade students on their ability to locate online misinformation and produce a structured debunk using platform verification tools.

Criteria	Exemplary (4 pts)	Proficient (3 pts)	Developing (1-2 pts)
Claim Identification	Accurately isolates specific medical claim and viral source context.	Identifies claim but lacks full original source context.	Vague or overly broad claim statement.
Evidence Lookup	Cross-references against 2+ primary PubMed/WHO databases.	Cross-references against 1 valid database.	Relies on commercial search or unverified websites.
Manipulation Analysis	Correctly identifies 2+ emotional triggers or AI citation errors.	Identifies 1 emotional trigger accurately.	Misses key manipulation markers.

3. Pre-Test & Post-Test Evaluation Protocol

Measuring Student Learning Gains

To measure impact, administer the 5-minute Pre-Test prior to Sheet #1 and the Post-Test (Classroom Sheet #3) immediately following Sheet #2's activity.

Step-by-Step Evaluation Implementation

1. **Baseline Pre-Test Administration**
   Distribute prior to introducing AI search concepts. Collect baseline scores on citation checking and confidence in AI summaries.

2. **Instructional Delivery & Hands-On Lab**
   Execute Classroom Worksheets #1 and #2. Ensure students practice cross-referencing AI summaries against primary databases.

3. **Post-Test Survey & Growth Metric Calculation**
   Administer Classroom Sheet #3. Compare pre/post scores to measure increase in student critical evaluation capability.

Key Efficacy Metrics to Track

Key target outcome: **>80% of students** should demonstrate ability to spot hallucinated citations and identify at least two emotional manipulation triggers in viral posts upon completing this unit.
